## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1, 3-8 and 10-14 are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

#### ***Claims 1, 3-8 and 10-14***

None of the prior art of record teaches or suggests a fixing apparatus comprising a setting means for variably setting a set value corresponding to electric power to be supplied to the temperature raising means, based on a temperature rise speed detected by the temperature detecting means when a predetermined amount of electric power is supplied, and a control means for temporally supplying electric power corresponding to the set value set by the setting means to the temperature raising means in timing close to timing in which the temperature detected by the temperature detecting means reaches a target temperature, or timing close to timing in which the recording material rushes in the pressure contact portion when the fixing apparatus is started up; wherein time  $t$  of a period for which the control means is operated is represented by  $t \leq (a + L)/V$  where  $V$  is a moving speed of an outer circumference of the first rotatable member,  $a$  is a length of the first rotatable member from the pressure contact portion to the temperature detection location, and  $L$  is an outer circumferential length of the first rotatable member.
